

## Montana Board of Oil and Gas Conservation Environmental Assessment

**Operator:** URSA Resources Group, LLC  
**Well Name/Number:** Sorteberg 27-34 #1  
**Location:** NE NE Section 27T25N R57E  
**County:** Richland, MT; **Field (or Wildcat)** Wildcat

### Air Quality

(possible concerns)

Long drilling time: No, 25-35 days drilling time.

Unusually deep drilling (high horsepower rig): A triple derrick rig, estimated 900-1000 HP to drill a single lateral Bakken Formation Horizontal Lateral, 19,078' MD/10,462' TVD.

Possible H<sub>2</sub>S gas production: Slight

In/near Class I air quality area: No, not in a Class I air quality area.

Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under rule 75-2-211.

Mitigation:

☒ Air quality permit (AQB review)

☒ Gas plants/pipelines available for sour gas

☐ Special equipment/procedures requirements

☐ Other: \_\_\_\_\_

Comments: Existing pipeline for H<sub>2</sub>S gas and sweet gas in the area.

---

### Water Quality

(possible concerns)

Salt/oil based mud: Yes to intermediate casing string hole, oil based invert drilling fluids. Saltwater for the horizontal openhole lateral. Surface casing hole to be drilled with freshwater and freshwater mud.

High water table: No high water table anticipated.

Surface drainage leads to live water: No, closest drainage is an ephemeral drainage First Hay Creek, about 1/4 of a mile to the southwest from this location. Stock ponds in First Hay Creek about 4 miles to the southeast from this location.

Water well contamination: None, surface hole will be drilled with freshwater and freshwater drilling fluids to 2,300', steel surface casing will be run and cemented to surface from 2,300' to protect any ground and surface waters. Closest water wells are about 5/8 of a mile to the west and 3/4 of a mile to the west southwest from this location. All other wells are 1 mile or further from this location. Depth of these domestic and stock water wells are from 530' and 60'.

Porous/permeable soils: No, sandy clay soils.

Class I stream drainage: No, Class I stream drainage.

Mitigation:

☒ Lined reserve pit

☒ Adequate surface casing

☐ Berms/dykes, re-routed drainage

☐ Closed mud system

☐ Off-site disposal of liquids (in approved facility)

☐ Other: \_\_\_\_\_

Comments: 2,300' of surface casing is not enough surface casing to cover Base Fox Hills Formation. Recommend surface hole to be drilled with freshwater and freshwater drilling muds to 2,300'. Steel surface casing will be run to 2,300' and cemented to surface. Oil based invert drilling fluids will be recycled. Drill cuttings will be disposed of in the lined pit. After the well has been completed, completions fluids will go to a commercial Class II disposal.

## Soils/Vegetation/Land Use

(possible concerns)

Steam crossings: None, anticipated.

High erosion potential: No high erosion potential, small cut, 8.6' and small fill, up to 10.0', required.

Loss of soil productivity: None, location to be restored after drilling well, if well is nonproductive. If productive unused portion of drillsite will be reclaimed.

Unusually large wellsite: No, large well site 400'X400'.

Damage to improvements: Slight, surface use is cultivated land.

Conflict with existing land use/values: Slight.

Mitigation

☐ Avoid improvements (topographic tolerance)

☐ Exception location requested

☒ Stockpile topsoil

☐ Stream Crossing Permit (other agency review)

☒ Reclaim unused part of wellsite if productive

☐ Special construction methods to enhance reclamation

☒ Other: Requires DEQ General Permit for Storm Water Discharge Associated with Construction Activity, under ARM 17.30.1102(28).

Comments: Access will be over existing county road, #138. A short new access road, about 262' will be built into this location. Oil based drilling fluids will be recycled. Completion fluids will be hauled to a Class II commercial disposal. Drill cuttings will be buried in the lined reserve pit. No concerns.

## Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: Closest residences about 5/8 of a mile to the west southwest, 7/8 of a mile to the southeast and 1 mile to the east from this location. St. Peter's church is about 3/8 of a mile to the east from this location.

Possibility of H2S: Slight

Size of rig/length of drilling time: Triple derrick drilling rig, 25 to 35 days drilling time.

Mitigation:

☒ Proper BOP equipment

☐ Topographic sound barriers

☐ H2S contingency and/or evacuation plan

☐ Special equipment/procedures requirements

☐ Other: \_\_\_\_\_

Comments: Adequate surface casing cemented to surface with working BOP stack should mitigate any problems.

## Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.

Proximity to recreation sites: None identified.

Creation of new access to wildlife habitat: No

Conflict with game range/refuge management: No, no game range/refuge in the area.

Threatened or endangered Species: Threatened or endangered species identified by USFWS in Richland County are the Pallid Sturgeon, Whooping Crane, Interior Lease Tern and Piping Plover.

Mitigation:

☐ Avoidance (topographic tolerance/exception)

☐ Other agency review (DFWP, federal agencies, DSL)

☐ Screening/fencing of pits, drillsite

☐ Other: \_\_\_\_\_

Comments: Private cultivated surface lands away from live water. No concerns.

---

### Historical/Cultural/Paleontological

(possible concerns)

Proximity to known sites None identified.

Mitigation

avoidance (topographic tolerance, location exception)

other agency review (SHPO, DSL, federal agencies)

Other:

Comments: Private cultivated surface lands away from live water. No concerns.

---

### Social/Economic

(possible concerns)

Substantial effect on tax base

Create demand for new governmental services

Population increase or relocation

Comments: Horizontal Bakken Formation wildcat oil well. No concerns.

---

### Remarks or Special Concerns for this site

Single lateral Bakken Formation development horizontal well 19,078'MD/10,462'TVD.

---

### Summary: Evaluation of Impacts and Cumulative effects

No long term impacts expected. Some short term impacts will occur.

---

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.
